TCS MERIDIAN BROKER · USE CASE

Strengthen Client Retention & Producer Effectiveness

Commercial Lines Intelligence Cockpit: Overcoming Siloed Enterprise Data with Grounded AI Synthesis

TARGET PERSONAS
Producers & Regional Leaders

PROBLEM STATEMENT

CORE CHALLENGE:

Data is Siloed in Multiple Sources Across the Enterprise

No unified client picture; operational data trapped in disparate legacy systems.

1. Disconnected Enterprise Systems

- In-force policies stored in Policy Admin (PolicyCenter)
- Account interactions & client notes in Salesforce CRM
- Claims in claims desks; Invoices & billing in ERP / accounting.

2. Severe Producer Friction & Lost Time

- Commercial producers spend 40%+ of time hunting data.
- Tedious manual cross-referencing before client renewal meetings.
- Cognitive overload leads to superficial meeting preparation.

3. Dangerous Blind Spots & Avoidable Churn

- Discrepant renewal dates (CRM vs PAS) cause missed renewals.
- High-severity open claims near renewal blindside producers.
- Unresolved billing disputes & overdue commitments trigger churn.

SOLUTION APPROACH: UNIFIED CLIENT INTELLIGENCE PLATFORM

1. Unified Client Data Hub (RDBMS)

- Harmonizes 10+ relational operational domains into an integrated ACID store (SQLite/PostgreSQL).
- Connects accounts, contacts, policies, claims, billing, cases, documents, & commitments.
- Chronological unified timeline across all systems.

2. Deterministic Intelligence Engine

- 10 Automated Business Rules (R1–R10) running dynamically over live operational records.
- Reconciles PAS vs CRM renewal date discrepancies.
- Computes mathematical evidence confidence scores & rolls up account risk tiers (High/Med/Low).

3. Grounded AI Intelligence Agent

- Dual-Model Strategy: Primary GPT-4o + Gemini Flash fallback for high resilience.
- Offline Deterministic Fallback: Zero-downtime operation if cloud gateways are unreachable.
- Claims Completeness Guardrail: Guarantees 100% of open claims are cited in brief.

4. Role-Tailored Cockpits (React 19)

- Producer Cockpit: Risk-ranked books, 5 record tabs, facts vs hypotheses, 1-click printable brief.
- Regional Leader Cockpit: Macro portfolio overview, 30/60/90-day renewal pipeline, producer workloads.
- TanStack Query caching for instant sub-50ms UI response.

⚡ 90% Faster Prep Time
Dynamic 1-page synthesis replaces hours of manual cross-system data hunting.

Zero Renewal Surprises
Automated claim completeness guard & date contradiction reconciliation.

Retention Lift & Growth
Proactive multi-tier risk mitigation + evidence-grounded cross-sell hypotheses.

Zero-Trust Governance
PBKDF2 auth, row-level book scoping, CSRF defense, and AI token/cost audit.
