1. Evidence confidence

Evidence % = source reliability x recency factor

Source system	Reliability
Guidewire ClaimCenter	0.95
Guidewire PolicyCenter	0.95
Billing System	0.90
ServiceNow	0.85
Salesforce CRM	0.75
Document Store (notes, emails, plans)	0.60

Age of the record at the as-of date	Recency factor
30 days or less	1.00
31 to 90 days	0.90
91 to 180 days	0.80
Over 180 days	0.65

Example: a CRM record 41 days old scores 0.75 x 0.90 = 0.675, rounded to 68%.

2. Risk confidence (facts)

Risk % = min(0.98, strongest evidence % + corroboration)

- **Corroboration:** +0.05 per additional independent source system, up to +0.10.
- **Conflicts (R2):** use the weakest conflicting source and add no corroboration.
- **Cap:** 0.98, so nothing reads as 100% certain.

3. Opportunity confidence (hypotheses)

Opportunity % = min(0.75, 0.30 + explicit + sources + gap) x recency of the freshest evidence

Component	Points
Base (any rule-flagged idea)	0.30
Client explicitly stated the plan or need	+0.20
Each additional independent source	+0.10, up to +0.20
Coverage gap confirmed (policies checked, none on file)	+0.10
Cap before recency	0.75

If the policies weren’t checked, give no gap points.

4. Labels

- 80% and above: high confidence.

- 60 to 79%: medium confidence.
- Below 60%: low confidence. Opportunities here are labeled Hypothesis, insufficient evidence.
- Referrals need an opportunity at 60% or more, plus human approval.

5. The ten rules

ID	Condition	Type	Severity
R1	Open claim on a policy renewing within 60 days	Risk	The claim’s own severity
R2	Renewal date in Policy Admin differs from the CRM	Risk	Medium
R3	Endorsement pending, policy renews within 90 days	Risk	Medium if renewal is within 30 days, else low
R4	Service case is open	Risk	Medium for Claims Handling or Billing, else low
R5	Notes or documents mention a plan or change that could need coverage	Opportunity	Priority medium if explicitly stated, else low
R6	Commitment past due and not done	Risk	Medium
R7	Invoice overdue	Risk	Medium
R8	Last logged activity over 180 days old	Risk	Low
R9	Notes contain risk words (price, unhappy, concern, frustrated, complaint)	Risk	Low
R10	Policy record not updated in over 540 days	Risk	Low

Risks are facts. Opportunities are never facts.

6. Client risk level

- **High:** at least one high-severity risk.
- **Medium:** no high, but at least one medium-severity risk.
- **Low:** neither.
- Only risks with confidence of 50% or more count, and opportunities never count.

7. Worked examples

- **Riverside open claim:** 0.95 x 1.00 = **95%**.
- **Riverside conflicting dates:** CRM 0.75 x 0.90 = **68%**.
- **Lakeside no recent meeting:** 0.75 x 0.65 = **49%**.
- **Maple Tech Tech E&O:** (0.30 + 0.20 + 0.10 + 0.10) = 0.70 x 0.90 = **63%**.
- **Cedar EV pilot:** 0.30 x 1.00 = **30%**.

Round every score to two decimals. Severity and confidence are separate, and the UI shows both. These values are initial proposals for your team to confirm, and the thresholds (60, 90, 180 and 540 days, the 50% roll-up floor and the 60% referral gate) are the ones most likely to need tuning.
